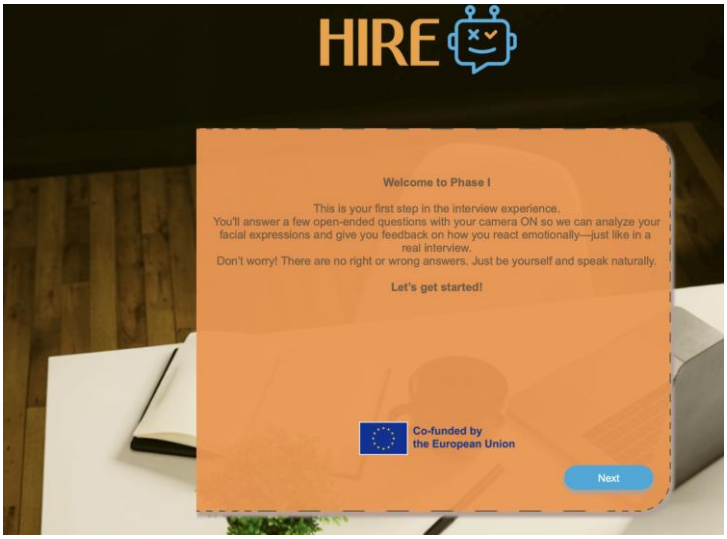
Enhancing Candidates Opportunities for Successful Interviews

October 2025

Newsletter #4

Final inputs: App, Piloting and Multiplier Events



Explore the AI Interview Preparation App

The concept AI Interview Preparation App focuses in using Artificial Intelligence to create and simulate a Real Interview that allows trainees to practice for their interviews with a customizable avatar.

Incorporating advanced technologies like sentiment analysis and emotional AI, the app includes a library of 100+ questions in four languages and provides feedback not only on the interview skills acquisition but also on body language, voice tone, and emotional parameters post-interview, using facial recognition and voice analytics.

Learners can use the app to practice real interview scenarios and receive a personalized report highlighting areas for improvement and skills gaps. This tailored feedback helps them focus on developing the specific elements they need to strengthen, ensuring better preparation for future interviews.

🎯 What You'll Find Inside

Phase 1

A realistic job interview simulation using a 3D avatar that allows you to test your skills, get used to the pressure, and walk into your next interview feeling calm, ready, and in control

You will answer open-ended questions that real interviewers ask, from the classic to the unexpected

Phase 2

You will dive into questions that focus on building key soft skills like communication, confidence, problem solving, among others.

These are the skills that help you stand out and shine in any interview.

HIRE PILOTING AND MULTIPLIER EVENTS

Final Piloting Sessions of the App

As part of WP3, a final piloting sessions of the app were done during August- October with more than 100 learners (at least 20 per partner) who are the end-user of this results. These sessions provided valuable insights into the emotional and technical aspects of the AI Interview Preparation app.

Some comments received:
•I really like the initiative of this app and I think it's very useful for young people who have to face interviews without having been trained for it.

Multiplier Events

During the month of October all the partners celebrated their Let´s Get HIRE-D Events promoting all the materials and results developed at local and regional level.

More than 180 participants participated in the different national events.

Participants were target-group representatives including VET learners and VET trainers, adult educators, unemployed and long-term unemployed people, stakeholders of employment and public services etc. Participants who have already been engaged throughout the project were also welcomed and some of them participated actively in the events
